

Note that

The dtb firmware is a universal unscrambler software this means works on both digital TVs and decoders that have USB port.

You can download this unscrambler file for free from www.dtbfirmware.com website.

HOW TO DOWNLOAD DTB FIRMWARE FOR FREE

1. Go to www.dtbfirmware.com/shop
2. In shop category select the dtb file version you are interested in.
3. Click on download now button and get your file

HOW TO INSTALL DTB FIRMWARE

Files downloaded freely on www.dtbfirmware.com

1. Unzip the zipped file and copy the extracted bin to root directory of usb flash drive
2. Go to settings and select software upgrade or system upgrade (via usb)

3. At this point the decoder/tv will automatically detect the firmware file.
4. Click okay to confirm and start the upgrade process.
5. After successfully reaching 100%, the tv/Decoder will reboot or you can reboot it by yourself.
6. Now the file has already upgraded your device to latest version and encrypted & masked the \$ and key locks on scrambled channels airing freely.

WWW.DTBFIRMWARE.COM

7. Enjoy all local and international channels freely.
8. You can Use the same file on multiple devices (more than one)
9. **NOTE :**

If you factory reset your device, you will again loose all unscrambled Channels back to scrambled and you might again need to Unscramble them using the dtb firmware .
